

IN THE SPECIFICATION:

Summary of the Invention: Kindly replace the text on page 2, line 29, to page 3, line 4, to read in full as follows:

In one illustrative embodiment, a method is provided for screening broadcast programming. The method comprises receiving broadcast programming on a broadcast channel, presenting the received broadcast programming to a user in real time, and receiving user input from a real time screener. The user input comprises real time screening information having at least a content of interest start time and end time that define a content of interest segment based on the received broadcast programming. The method further comprises storing the received broadcast programming, receiving the stored broadcast programming and the real time screening information, presenting portions of the stored broadcast programming before and after the start time and end time, and receiving user input from a precision screener. The user input comprises precision screening information having a precise start time and end time for the content of interest segment based on the portions of the stored broadcast programming. The method further comprises generating a real time screening signal based on the real time screening information and generating a precision screening signal based on the precision screening information. The method further comprises receiving user input from a plurality of real time screeners. The user input comprising at least a content of interest start time and end time defining a content of interest segment based on the broadcast programming. The method further comprises generating the real time screening information based on the user input from the plurality of real time screeners. Generating the real time screening information based on the user input from the plurality of real time screeners comprises reconciling differences in delay among one or more of the plurality of real time screeners to generate reconciled content of interest segment information.

These and other features and advantages of the present invention will be described in, or will become apparent to those of ordinary skill in the art in view of, the following detailed description of the example embodiments of the present invention.
